

Supplemental Figure 1. (a) Hematoxylin and eosin staining did not reveal any gross differences in neurofibroma tissue morphology between vehicle and FLLL32-treated mice. **(b)** Macrophages (Iba-1⁺) are also reduced in neurofibroma from *Dhh-Cre;Nf1 fl/fl;Stat3 fl/fl* mice relative to *Dhh-Cre;Nf1 fl/fl* (* $p < 0.05$, two-tailed T test).
